Measure Title
AQI56: Use of Neuraxial Techniques and/or Peripheral Nerve Blocks for Total Knee Arthroplasty (TKA)

Measure Description
Percentage of patients, regardless of age, that undergo primary total knee arthroplasty for whom neuraxial anesthesia and/or a peripheral nerve block is performed.

NQS Domain / Meaningful Measures Area
Effective Clinical Care / Appropriate Use of Healthcare

Measure Type
Process

High Priority Status
No

Inverse Measure
No

Instructions
This measure is to be reported each time a patient undergoes primary total knee arthroplasty. It is anticipated that qualified anesthesia providers and eligible clinicians who provide denominator-eligible services will submit this measure.

Measure Reporting via the Qualified Clinical Data Registry
CPT codes are used to identify patients who are included in the measure denominator. Registry codes are used to report the numerator of the measure.

Denominator
All patients, regardless of age, who undergo primary total knee arthroplasty

Denominator Criteria (Eligible Cases):
All patients, regardless of age
AND
Patient encounter during the reporting period (CPT):
01402

Denominator Exclusions
- Revision of TKA: CPT 27486, 27487 or 11A09
- Prosthesis Removal: CPT 27488 or 11A10

Numerator
Patients for whom neuraxial anesthesia and/or a peripheral nerve block is performed.

Numerator Note: For the purposes of this measure, a peripheral nerve block performed either as primary procedural anesthesia or performed for postoperative analgesia would meet the numerator.
Numerator Quality - Data Coding Options for Reporting Satisfactorily

**Performance Met:**

10A78  Neuraxial anesthesia and/or a peripheral nerve block was used

**OR**

**Denominator Exception:**

11A01  Documentation of patient reason(s) for not using either neuraxial anesthesia or a peripheral nerve block (e.g., patient refusal)

**OR**

**Performance Not Met:**

10A79  Neuraxial anesthesia and/or a peripheral nerve block was NOT used

NQF Number:  Not Applicable

eCQM:   Not Applicable

**Rationale**

Regional anesthesia is associated with improved patient outcomes and lower postoperative morbidity and mortality compared to general anesthesia in patients undergoing TKA. Patients receiving neuraxial anesthesia typically lose less blood during surgery, leading to reduced need for many blood transfusions. Additionally, some studies support the notion that spinal anesthesia is associated with lower incidence of surgical site infection when compared to general anesthesia. Peripheral nerve blocks (PNBs) can be used as part of a pain management protocol after knee replacement surgery when compared with systemic analgesia, patients receiving PNBs have better pain scores and use less opioids after surgery. By requiring fewer opioids after surgery, patients also avoid opioid-related side effect such as sedation, respiratory depression, nausea, vomiting, and constipation. They also have better functional outcomes and have overall, a better perioperative experience.

Strength of the evidence supporting neuraxial anesthesia and PNB is sometimes questioned as some of the supporting studies are retrospective in nature and mainly derived from analysis of administrative databases. However, evidence from randomized clinical trials either support better outcomes with regional anesthesia or show that there is no difference with the anesthesia technique.

**Clinical Recommendation Statements**

**2015 AAOS Evidence-Based Clinical Practice Guideline for Surgical Management of Osteoarthritis of the Knee**

“Strong evidence supports that peripheral nerve blockade for total knee arthroplasty (TKA) decreases postoperative pain and opioid requirements. Strength of Recommendation: Strong Evidence: 4 stars”

“Moderate evidence supports that neuraxial anesthesia could be used in total knee arthroplasty (TKA) to improve select perioperative outcomes and complication rates compared to general anesthesia. Strength of Recommendation: Moderate, Evidence: 3 stars”

**Data Source:** Claims/Paper Medical Record, Registry

**Measure Steward:** American Society of Anesthesiologists (ASA) / Anesthesia Quality Institute (AQI)

**Number of Performance Rates:** 1

**Proportion Measure Scoring:** Yes
Continuous Measure Scoring: No
Risk Adjustment: No
Use of Neuraxial Techniques and/or Peripheral Nerve Blocks for Total Knee Arthroplasty (TKA)
2020 QCDR Measure Flow

Denominator

Start

All patients, regardless of age

Patient Encounter Listed in Denominator

No

Not Included in Eligible Patient Population

Yes

Include in Eligible Population/Denominator

Revision of Total Knee Arthroplasty or Prosthesis Removal

Yes

Neuraxial Anesthesia and/or Peripheral Nerve Block used

No

Documentation of patient reason(s) for not using neuraxial/nerve block

Yes

Reporting Met + Performance Met 10A78

No

Reporting Met + Performance Not Met 10A79

No

Reporting Not Met
