

# THE MEDNAX SIMULATION PROGRAM

## Improving patient safety and quality through simulation-based education

The MEDNAX Simulation Program offers a unique opportunity to provide dynamic team training and education at your local facility. Developed by experienced simulation educators, our accredited program's curriculum covers a broad range of simulation scenarios focusing on education, communication, patient safety and quality improvement. Our program is designed to meet the needs of our health care providers and hospital partners and identify areas for process improvement in a safe, simulated environment. Our program focuses on a variety of areas including:

- ➔ Interdisciplinary care team dynamics and patient safety strategies for effective communication
- ➔ Quality and safety measures specific to your practice
- ➔ Consultation to optimize or develop the use of your simulation center and equipment
- ➔ Train-the-trainer and standards implementation
- ➔ Feedback on team performance and potential areas for process improvement

### Specialty areas of team training include:

- NICU — NICU-based scenarios, including delivery
- Labor and Delivery — obstetrical complications during and after delivery
- Pediatrics — general pediatrics, Pediatric ED
- PICU — pediatric emergencies

## continued

### Top reasons to consider in situ simulation training:

1. Enhance team response to acute situations by providing a realistic experience utilizing equipment, resources and policies specific to your facility.
2. Provide your clinical teams with a more unique training experience.
3. Create an opportunity for the entire health care team to be engaged in team training.
4. Improve your team's performance in a milieu of safety without adverse consequence.

### Program Highlights

- ➔ Tailored to meet your facility's logistical and equipment needs
- ➔ No travel required
- ➔ Full multidisciplinary staff engagement within our customized scenarios, including physician and advanced practice providers
- ➔ Two different modalities of simulation-based education and training
- ➔ Objective data collection during the simulated experience based on national standards
- ➔ Data-driven key performance indicator feedback to local leadership
- ➔ Optimization of clinical quality and patient safety indicators
